

 Charge Anywhere®

ComsGate® Level 3 Processing Product Overview

Comparing Level 1, 2 and 3 Card Processing

- **Level 1** – Standard consumer transaction which provides limited purchase data back to the cardholder
- **Level 2** – Includes Level 1 data plus Sales Tax and Customer Code
- **Level 3** – Includes line item detail for corporate and government customers. Qualifies for lowest interchange rates.

A Win-Win for Business/Governments and Merchants

Benefit to Business and Governments - Large corporations and government agencies use Level 3 purchase cards to effectively monitor and track their spending.

Benefit to Merchants – Merchants typically receive better processing rates for corporate purchase card transactions than consumer credit card transactions.

How Level 3 Processing Works

Level 3 processing requires the capture of specific line item data in credit card transactions

- Merchant name and address
- Invoice number and tax amount
- Invoice line item details including:
 - Item description
 - Quantity and unit of measure
 - Freight amount
 - Commodity and product codes
