

Transact Optimally with the Poynt Register App

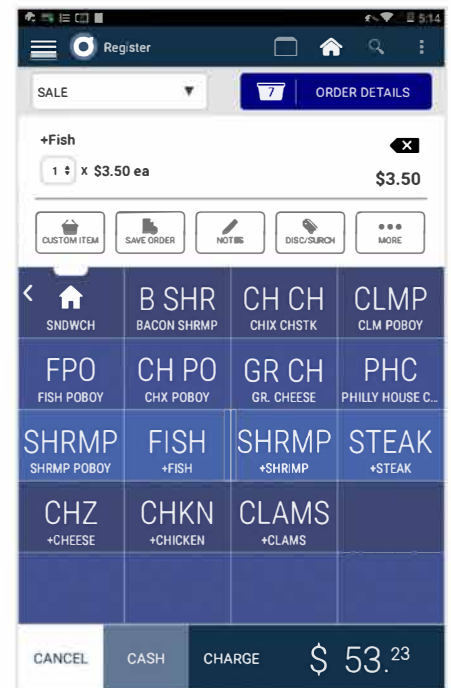

Organize, Optimize and Transact in One Place

Your clients depend on you for the products and services they love. Register lets you optimize your catalog in order to process transactions accurately and efficiently, making you and your client's payment experiences seamless.

The Flexibility You Need To Run Your Business

- ▶ Create a flexible hierarchy of Catalogs, Categories and Products to suit your business's needs
- ▶ Benefit from the flexibility of custom taxes, surcharges and discounts, which allow you and your staff to apply the right additions at the right time
- ▶ Manage your inventory with convenient reports, like item-level reporting, which tell you what is and isn't selling
- ▶ Process refunds directly from the Register app; eliminating the need to jump from app to app

Register comes pre-programmed on all Poynt Terminals; for many customers, it is a tool they cannot live without. Customers can easily add to or modify their catalog on Poynt.net or via the Poynt Smart Terminal.

In a fast paced business like ours, we need a POS system that allows us to streamline our transactions, and Register has done that for us. We were able to customize catalog items, like our famous cheese steak sandwich, with add-ons like premium toppings and options; this helped us to customize orders quickly and never under or overcharge our guests.
